

What's New

Version 3.0

What's New in mapClient 3.0

Content / Topic Tree

Restructuring of the topic tree:

- > roles-independent definable background maps
- > new topic management for an easier and faster access to preconfigured locally or thematically combinations of services

New Service Types Supported

- > Support of INSPIRE View Services
- > Support of Sensor Observation Service (OGC SOS)
- > WSS-secured ArcGIS Server MapServer can be used

Functions and Tools

- > Possibility of defining groups of functions and tools
- > New drilldown function "Identify": GetFeatureInfo query via Info button provides feature info for all active layers
- > New drilldown function "Hyperlink": Service with "Hyperlink" fields display this via the Hyperlink button

Drawing

- > New drawing function "Coordinates by Map Click" to show the coordinates of a point in the map or to enter coordinates and show the position

Print

- > Distance and area measurements can be printed
- > A north arrow is incorporated in printouts

Search

- > New option for spatial searches and navigation: a generic WFS gazetteer can be used and via pulldown lists a hierarchical search can be defined (e.g. „city“ – „street“ – „street number“)
- > More than one search can be predefined so different searches can be used
- > The Search dialog has been positioned on the map

Project File (WMC file)

- > Service type "GeorSS" is savable in the WMC project file

What's New in mapClient 3.0

Coordinate Reference System

- > CRS EPSG:25833 (UTM 33) is supported and preconfigured in the default configuration of mapClient

wfsEditor for mapClient (Web Editing)

- > Web editing via OGC WFS-T interface works with ArcGIS Server WFS-T (version 9.3.1 SP1 and 10)
