Backup My Org

Backup My Org is an all-in-one solution for the targeted backup, restoration and migration of your ArcGIS® elements, users and groups. With Backup My Org you can easily restore and backup your content and protect yourself from data loss or unintended changes.

How it works

Backup My Org is an application that is provided as a web service on your server or locally on your laptop. An integrated restore wizard helps you to edit your backups. In addition, dependencies between your data can be visualized.

Scope of services

- Creation of on-demand and scheduled backups

- Backup and restore the entire environment or individual content

- Cloning data between environments

- Visualisation of dependencies between data

Restoring Data

With Backup My Org, you can either restore your ArcGIS content to the same location or migrate to a different environment. The intuitive user interface puts you in control every step of the way. The software determines the status of your target content in the target environment and gives you the option to either create new items or update existing backed up items.
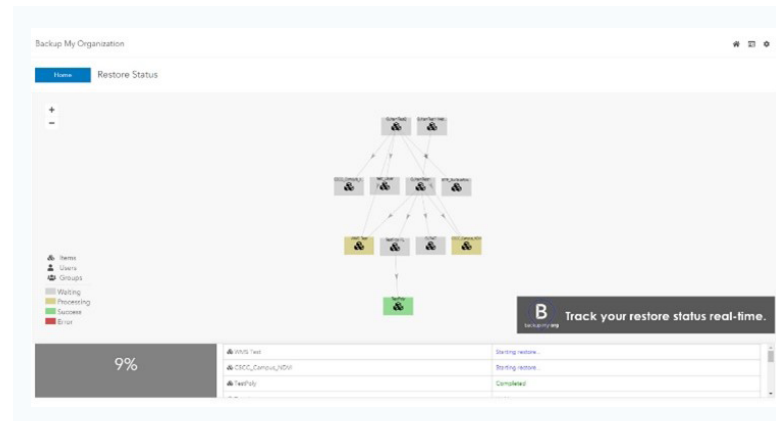

Cloning data between environments

You can use a cloning workflow to migrate elements, users and groups between environments. An intelligent restore wizard supports you relinking your data.

Visualise dependencies between data

Track your restore status in real-time

Advantages

- Restore content at individual or organisational level

- Visualisation of data dependencies for selecting a targeted backup

- Intuitive user interface with integrated restore wizard

- Wide range of functions for data backup and transfer
